

INSTAGRAM SAFETY TOOLS FOR CREATORS

KEEP YOUR COMMENTS SAFE

You can help foster kind, inclusive communities on Instagram by using comment moderation and filtering tools.

Accessing the comment filter tool

Go to your Settings menu, tap "Privacy" and then "Comments". Your "Hide Offensive Comments" filter is automatically defaulted on.

You can use the "Manual Filter" to filter out specific keywords, phrases and emojis. All previously entered words will still be active on your account. You can also control who can comment on your account - e.g. limiting comments to only the people you follow.

Turn off commenting altogether

Turn off commenting **before** you post in Advanced Settings

Turn off commenting **any time after** you post

Delete or report comments

Delete and report abusive comments

Filter words

Filter out specific words, phrases and emojis. Make sure to use a comma between each word or phrase

Comment warning

Instagram will notify people when their comment may be considered offensive and give them a chance to reflect and undo it.

Restrict

Protect your account from unwanted interactions. Once Restrict is enabled, comments from people you restrict will only be visible to them unless you approve them. Restricted people won't be able to see when you're online or when you've read their direct messages.

ACCOUNT AND AUDIENCE CONTROLS

Block accounts

Block an account so they won't see your content and you won't see their comments on other people's posts

Audience controls

Hide your Stories from specific people, so they can't see them. You can also allow message replies from only people you follow.

Remove followers

Remove followers without them knowing, so they no longer follow you

Report spam or abuse

Report a post as spam or abuse using "Report a Problem"

STOP HACKERS IN THEIR TRACKS

2-Factor Authentication is an additional security layer that helps secure an account from unauthorized password usage.

2 factor stops hackers in their tracks, so you can keep your private messages, photos and videos, as well as your followers and friends, safe. If someone who isn't you tries to log in to your account, we won't allow it unless they provide the 2-factor authentication secure code.

When 2 factor is enabled, logging in to your Instagram account requires your password *plus* a secure code that you can access through a 3rd-party authenticator app or receive via text message (SMS).

Recovery codes

Once 2FA is set up, you will have access to Recovery Codes, which enable you to log in if you are not able to receive your 2FA code via SMS or retrieve it on your 3PAA.

Once you set up 2FA, print the codes and store them somewhere safe. You may also screenshot and send them to a secure storage location on the web.

Here is how to log in to your account using the recovery code:

- 1 Go to the login page and insert your username and password
- 2 When asked for the security code, click on "Get Help Logging In"
- 3 Click on "Use Recovery Code"
- 4 Insert your recovery code and click "Confirm"

HOW TO SET UP 2 FACTOR AUTHENTICATION

Using 3rd-party authentication and text message (SMS)

Step 1:

Go to Settings, then Security, and tap on "Two-Factor Authentication."

Step 2:

Toggle the Authentication App switch and tap "Get Started." If you don't have Duo Mobile or Google Authenticator installed, you'll be redirected to first download the app, and can resume the process afterwards.

Step 3:

Click on "Next" and a code for Instagram will be sent to your authenticator app (we recommend Google Authenticator or Duo Mobile). If you want to have your third party codes set up on additional devices, tap on "Set Up Manually" to continue.

Step 4: (only for manual setup)

Copy the Instagram key provided and go back to your Instagram app.

Step 5:

Copy the 6-digit code provided from your authenticator app and go back to Instagram. Enter the code and tap "Next" to verify.

Step 6:

If you see this screen, then you've set up your 3rd-party authenticator app correctly! Tap "Next" to access your recovery codes.

Step 7:

Take a screenshot or copy the codes and store them somewhere safe. Tap "Done" to complete.
